

4-Bit binary to hex on seven segment V2

Dennis Junusov

09.09.2026

1 Goal

The goal of this experiment is to prepare for a infrared remote control communication. As I dont have any documentation about the remote control, I dont know what signal/data the remote is sending when pressing a button. So the idea is to create a project where I will display the recieved data on the 7seg display in hex.

2 Details

- Two digits will be displayed (00 to 0F)
- We have to multiplex between first and second digit
- Binary code on the dip switches is from right to left

3 Results

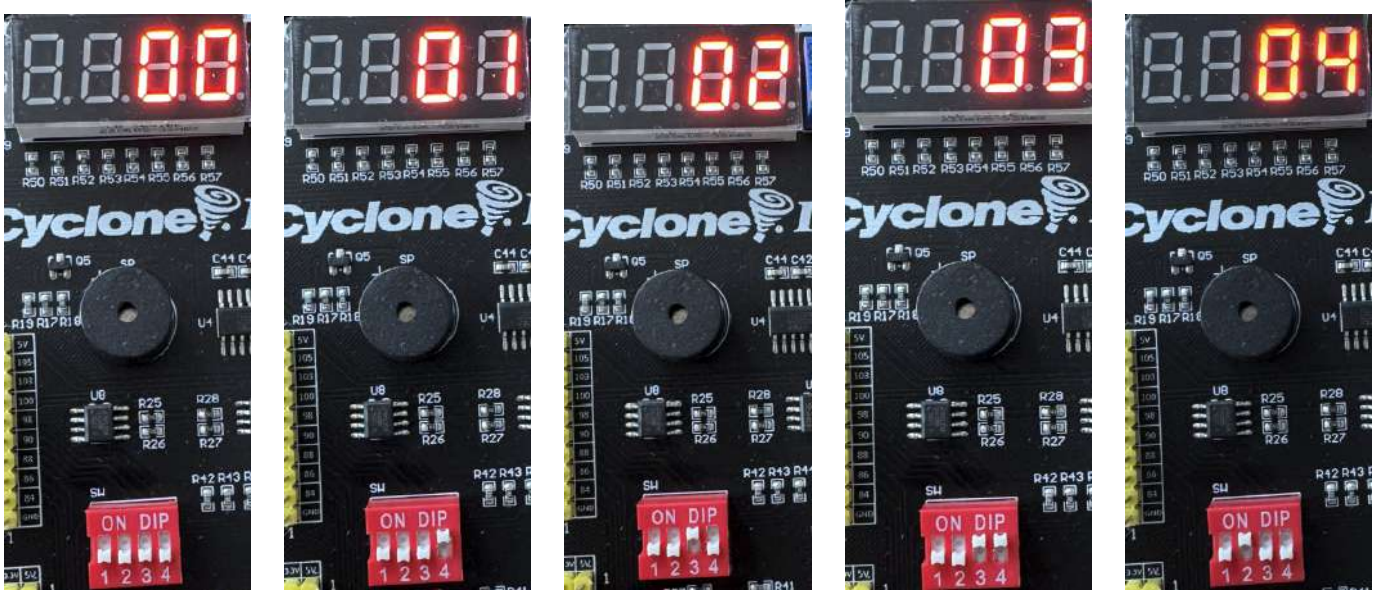

Figure 1: Digits zero to four

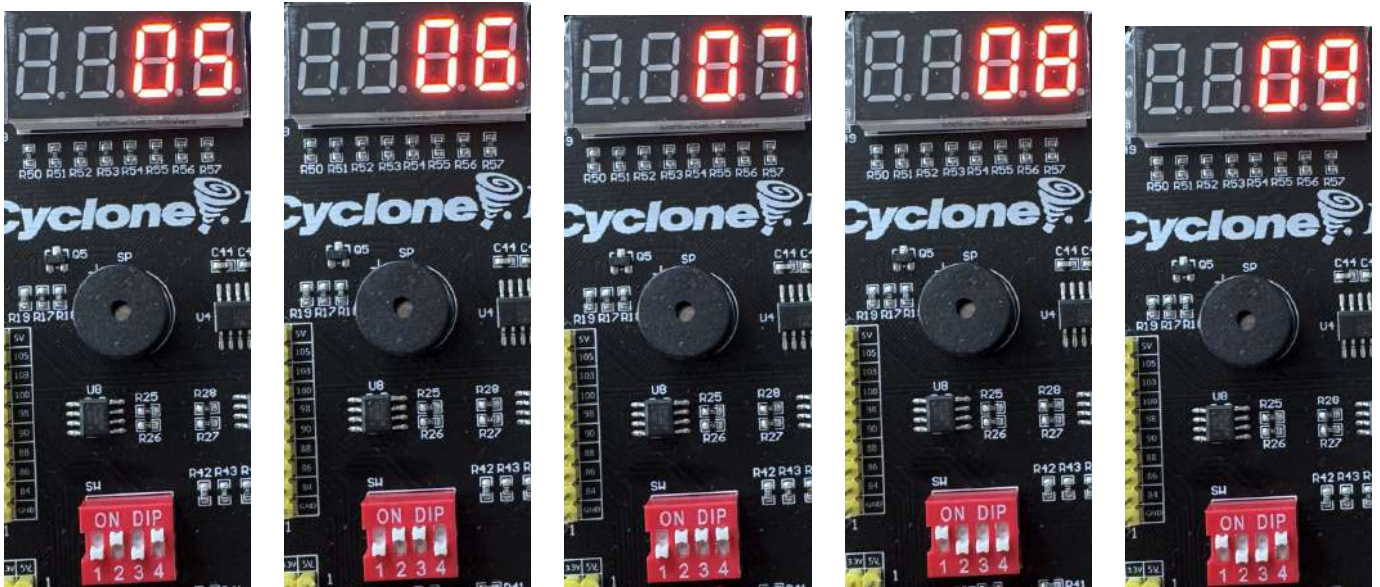

Figure 2: Digits five to nine

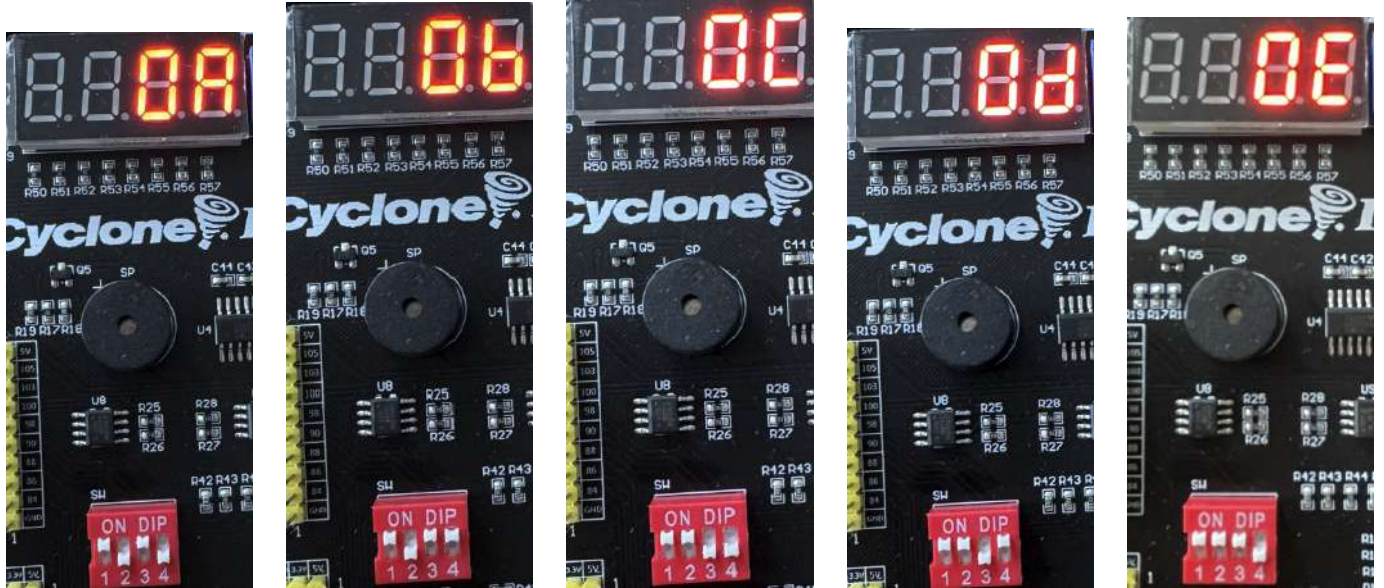

Figure 3: Digits ten to fourteen

Figure 4: Fifteen and IR-remote
