

4-Bit binary to seven segment V2

Dennis Junusov

05.09.2026

1 Goal

The goal of this experiment is to convert the four bit binary code and display the two digit number on the seven segment display of the dev. board.

2 Details

- Two digits will be displayed (00 to 15)
- We have to multiplex between first and second digit
- Binary code on the dip switches is from right to left

3 Results

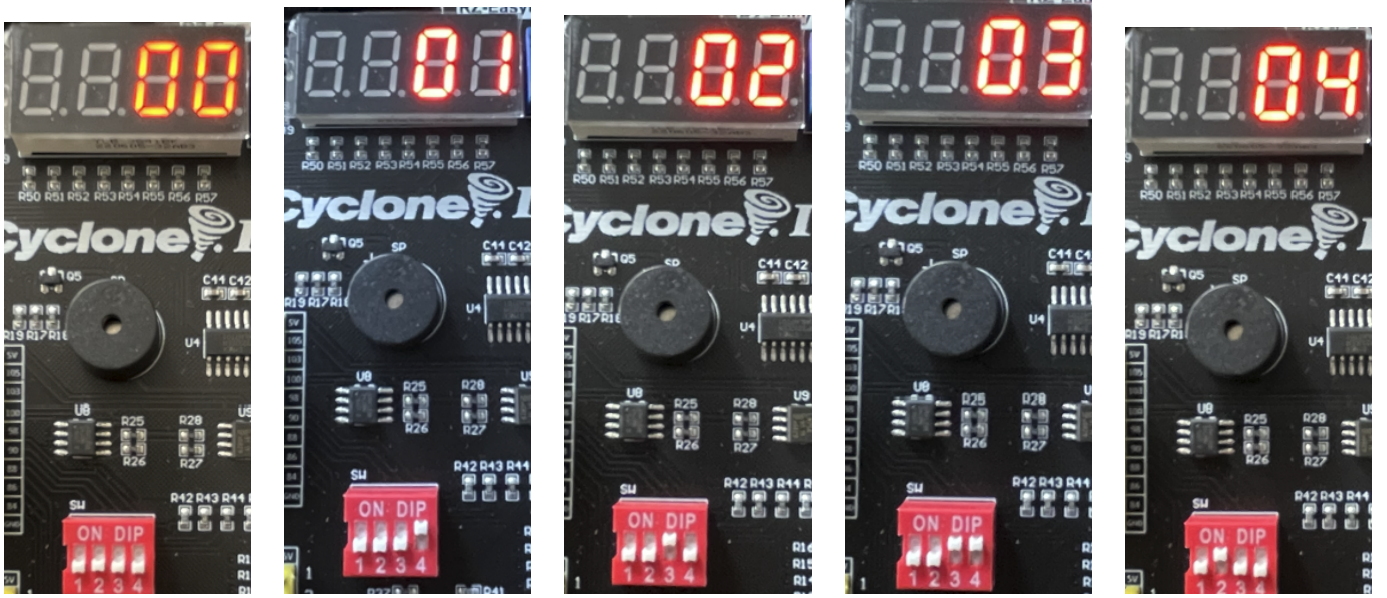

Figure 1: Digits zero to four

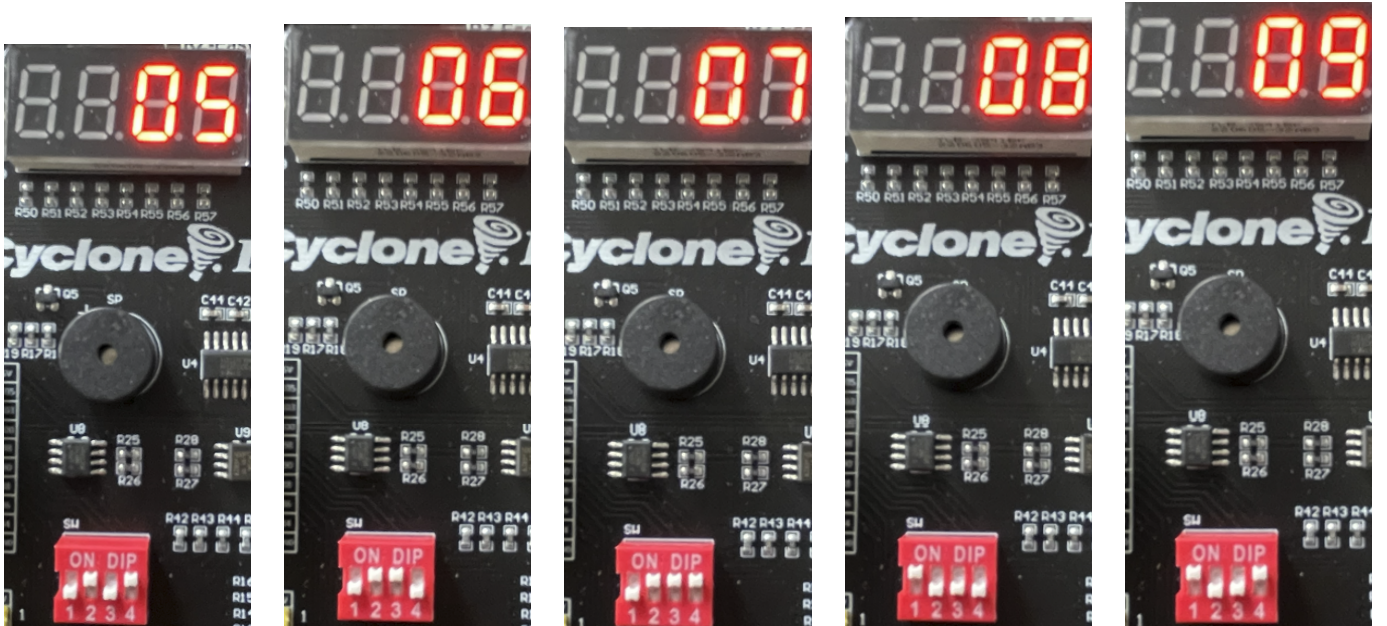

Figure 2: Digits five to nine

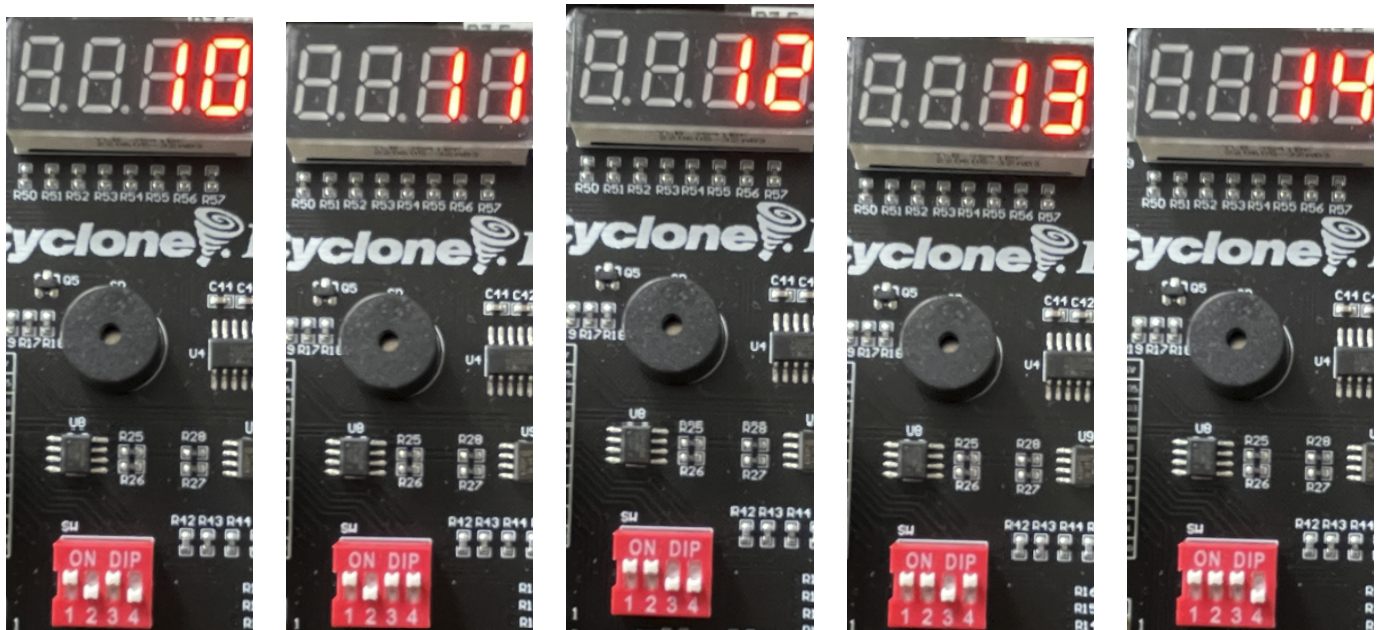

Figure 3: Digits ten to fourteen

Figure 4: fifteen
